METHOD AND APPARATUS FOR OUTPUTTNG A DATASTREAM PROCESSED BY A PROCESSING DEVICE

ABSTRACT OF THE DISCLOSURE

5   To synchronize a decoder at the receiving end, particularly an MPEG audio decoder, with the corresponding coder operating at the transmitting end, it is proposed to supply the data decoded by the decoder to a FIFO memory, the output clock rate at which the data are read out or output from the FIFO memory, being adjusted as a function of the loading level of the FIFO memory.
